New York, NY ❖ (929) 340-6112 ❖ Muaad.Alomari@outlook.com ❖ muaadalomari.com

EDUCATION

Brooklyn College, City University of New York (CUNY)

Fall 2026

Bachelor of Computer Science

- GPA: 3.96
- Dean's Honor Award

RELEVANT EXPERIENCE

Fitmoji

New York, NY

Software Engineer Intern

April 2026 – June 2026

- Developed a real-time web simulation of a mobile game's combat engine (Next.js/React), exposing 15+ in-game variables as live sliders so non-technical stakeholders could balance gameplay in-browser instead of waiting on native rebuilds, turning a multi-step redeploy loop into instant feedback.
- Engineered a custom real-time isometric rendering engine in TypeScript that recomputes screen position and draw order for hundreds of on-screen sprites every 32ms, sustaining smooth performance with dozens of concurrent entities.
- Refined a Firebase-backed backend (three Firestore collections + Cloud Storage) that serves user-published villages through cached Next.js API routes, with a server-only Admin SDK boundary exposing sanitized public data while keeping user records off the client.

CUNY Tech Prep

New York, NY

Web Development Fellow

August 2025 – June 2026

- Honed strong full-stack engineering expertise across React, Next.js, Node.js, and TypeScript, with a sustained focus on scalable system design and maintainable code architecture, grounded in professional practices such as Git-based version control, code review, and Agile collaboration.
- Refined technical decisions through iterative, feedback-driven development, participating in Agile sprints, stand-ups, and structured critique to continuously reassess architecture and implementation as project requirements evolved.

PROJECTS

GreenBite - <https://muaadalomari.com/#GreenBites>

Oct 2025 - Present

- Built GreenBites, a full-stack Next.js/React/TypeScript web app that lets users log meals via natural-language search and visualizes real-time nutrition and CO₂e impact through interactive Recharts dashboards.
- Integrated AI-powered natural language meal logging and real-time CO₂e emissions calculations, leveraging the OpenAI and USDA/Nutritionix APIs to help users make informed, sustainable food choices.

YourYugiohProfits - <https://muaadalomari.com/#YourYugiohProfits>

Feb 2025 – May 2025

- Engineered a full-stack card valuations website with the streamlining of TCG market analysis by aggregating dispersed pricing data into a single, responsive dashboard built with React, TypeScript, and TailwindCSS.
- Implemented price alert functionality in a Node.js/Express/MongoDB backend by automating periodic price checks with cron jobs and email notifications, enabling collectors to stay updated on card value changes in real time while ensuring account safety with bcrypt-secured authentication.

SKILLS

Languages: TypeScript, JavaScript, Java, Python, C++, SQL

Frontend: React, Next.js, Redux, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express, Drizzle, REST APIs, Prisma, PostgreSQL, MongoDB, FastAPI, Django, Flask

Tools: Git, GitHub, CI/CD, Docker, AWS, Vercel, Postman, Jira, Agile/Scrum, Linux/Unix
